Installation

You can easily install pygeoip from PyPi.

pip install pygeoip

CHAPTER 2)
-----------	---

Issues and Contribution

Bug reports are done by creating an issue on Github. If you want to contribute you can always create a pull request for discussion and code submission.

Documentation

3.1 Getting Started

Create your GeoIP instance with appropriate access flag. STANDARD reads data from disk when needed, MEMORY_CACHE loads database into memory on instantiation and MMAP_CACHE loads database into memory using mmap.

```
>>> import pygeoip
>>> gi = pygeoip.GeoIP('GeoIP.dat')
>>> gi.country_name_by_addr('64.233.161.99')
'United States'
```

3.1.1 Country Lookup

```
>>> gi = pygeoip.GeoIP('GeoIP.dat')
>>> gi.country_code_by_name('google.com')
'US'
>>> gi.country_code_by_addr('64.233.161.99')
'US'
>>> gi.country_name_by_addr('64.233.161.99')
'United States'
>>> gi = pygeoip.GeoIP('GeoIPv6.dat')
>>> gi.country_code_by_addr('2a00:1450:400f:802::1006')
'IE'
```

3.1.2 Region Lookup

```
>>> gi = pygeoip.GeoIP('GeoIPRegion.dat')
>>> gi.region_by_name('apple.com')
{'region_code': 'CA', 'country_code': 'US'}
```

3.1.3 City Lookup

```
>>> gi = pygeoip.GeoIP('GeoIPCity.dat')
>>> gi.record_by_addr('64.233.161.99')
{
    'city': u'Mountain View',
```

```
'region_code': u'CA',
'area_code': 650,
'time_zone': 'America/Los_Angeles',
'dma_code': 807,
'metro_code': 'San Francisco, CA',
'country_code3': 'USA',
'latitude': 37.4191999999999,
'postal_code': u'94043',
'longitude': -122.0574,
'country_code': 'US',
'country_name': 'United States',
'continent': 'NA'
}
>>> gi.time_zone_by_addr('64.233.161.99')
'America/Los_Angeles'
```

3.1.4 Organization Lookup

```
>>> gi = pygeoip.GeoIP('GeoIPOrg.dat')
>>> gi.org_by_name('dell.com')
'Dell Computer Corporation'
```

3.1.5 ISP Lookup

```
>>> gi = pygeoip.GeoIP('GeoIPISP.dat')
>>> gi.isp_by_name('cnn.com')
'Turner Broadcasting System'
```

3.1.6 ASN Lookup

```
>>> gi = pygeoip.GeoIP('GeoIPASNum.dat')
>>> gi.asn_by_name('cnn.com')
'AS5662 Turner Broadcasting'
```

3.2 Supported Databases

Туре	IPv4	IPv6	Details
Country	Yes	Yes	MaxMind Country product page
City	Yes	Yes	MaxMind City product page
Organization	Yes		MaxMind Organization product page
ISP	Yes		MaxMind ISP product page
Region	Yes		MaxMind Region product page
ASN	Yes	Yes	MaxMind ASN product page
Netspeed	Yes		MaxMind Netspeed product page

3.3 API Reference

3.3.1 GeoIP

```
class pygeoip.GeoIP (filename, flags=0, cache=True)
```

```
___init___(filename, flags=0, cache=True)
```

Create and return an GeoIP instance.

Parameters

- filename File path to a GeoIP database
- flags Flags that affect how the database is processed. Currently supported flags are STANDARD (default), MEMORY_CACHE (preload the whole file into memory) and MMAP_CACHE (access the file via mmap)
- cache Used in tests to skip instance caching

```
country\_code\_by\_addr(addr)
```

Returns 2-letter country code (e.g. US) from IP address.

Parameters addr – IP address (e.g. 203.0.113.30)

```
country_code_by_name (hostname)
```

Returns 2-letter country code (e.g. US) from hostname.

Parameters hostname – Hostname (e.g. example.com)

```
country_name_by_addr (addr)
```

Returns full country name for specified IP address.

Parameters addr – IP address (e.g. 203.0.113.30)

```
country_name_by_name (hostname)
```

Returns full country name for specified hostname.

Parameters hostname – Hostname (e.g. example.com)

```
id_by_addr(addr)
```

Returns the database ID for specified address. The ID might be useful as array index. 0 is unknown.

Parameters addr – IPv4 or IPv6 address (eg. 203.0.113.30)

```
last netmask()
```

Returns the netmask depth of the last lookup.

```
netspeed_by_addr (addr)
```

Returns NetSpeed name from address.

Parameters addr – IP address (e.g. 203.0.113.30)

netspeed_by_name (hostname)

Returns NetSpeed name from hostname. Can be Unknown, Dial-up, Cable, or Corporate.

Parameters hostname – Hostname (e.g. example.com)

org_by_addr(addr)

Returns Organization, ISP, or ASNum name for given IP address.

Parameters addr – IP address (e.g. 203.0.113.30)

3.3. API Reference 9

org_by_name (hostname)

Returns Organization, ISP, or ASNum name for given hostname.

Parameters hostname – Hostname (e.g. example.com)

record_by_addr(addr)

Returns dictionary with city data containing *country_code*, *country_name*, *region*, *city*, *postal_code*, *latitude*, *longitude*, *dma_code*, *metro_code*, *area_code*, *region_code* and *time_zone*.

Parameters addr – IP address (e.g. 203.0.113.30)

record_by_name (hostname)

Returns dictionary with city data containing *country_code*, *country_name*, *region*, *city*, *postal_code*, *latitude*, *longitude*, *dma_code*, *metro_code*, *area_code*, *region_code* and *time_zone*.

Parameters hostname – Hostname (e.g. example.com)

$region_by_addr(addr)$

Returns dictionary containing country_code and region_code.

Parameters addr – IP address (e.g. 203.0.113.30)

region_by_name (hostname)

Returns dictionary containing *country_code* and *region_code*.

Parameters hostname – Hostname (e.g. example.com)

time_zone_by_addr(addr)

Returns time zone in tzdata format (e.g. America/New_York or Europe/Paris)

Parameters addr – IP address (e.g. 203.0.113.30)

time_zone_by_name (hostname)

Returns time zone in tzdata format (e.g. America/New_York or Europe/Paris)

Parameters hostname – Hostname (e.g. example.com)

3.3.2 GeolPError

exception pygeoip. GeoIPError

Thin wrapper of *Exception*, will be thrown in case of an unrecoverable error.

Symbols __init__() (pygeoip.GeoIP method), 9 C country_code_by_addr() (pygeoip.GeoIP method), 9 country_code_by_name() (pygeoip.GeoIP method), 9 country_name_by_addr() (pygeoip.GeoIP method), 9 country_name_by_name() (pygeoip.GeoIP method), 9 G GeoIP (class in pygeoip), 9 GeoIPError, 10 id_by_addr() (pygeoip.GeoIP method), 9 last_netmask() (pygeoip.GeoIP method), 9 Ν netspeed_by_addr() (pygeoip.GeoIP method), 9 netspeed_by_name() (pygeoip.GeoIP method), 9 0 org_by_addr() (pygeoip.GeoIP method), 9 org_by_name() (pygeoip.GeoIP method), 9 R record_by_addr() (pygeoip.GeoIP method), 10 record_by_name() (pygeoip.GeoIP method), 10 region_by_addr() (pygeoip.GeoIP method), 10 region_by_name() (pygeoip.GeoIP method), 10 time_zone_by_addr() (pygeoip.GeoIP method), 10 time_zone_by_name() (pygeoip.GeoIP method), 10
